

*Coordination of Fast-Time and
Real-Time Simulation Activities*

Group 1

Is it necessary?

Yes!

Why is it not well coordinated?

- Technology is advancing
- People are becoming aware
- Reduce cost of R/T, increase fidelity of F/T, everyone benefits

What are the best practices?

- Concept Definition
- Feasibility
- Data Transfer
- Early evaluation of DST
- Hybrid RT, FT systems

Analysis and Metrics

- Are there common metrics - yes
- There are benefits to moving analysis to FT
- There are unique metrics that can not be shared (error, evaluation,???)
- Can it be done, vs. should it be done
