THE SECRETARY OF TRANSPORTATION
WASHINGTON, D.C. 20590

December 24, 1996

The Honorable Newt Gingrich
Speaker of the House of
Representatives
Washington, DC 20515

Dear Mr. Speaker:

Enclosed is the U.S. Department of Transportation's
Fourteenth Annual Report of Accomplishments Under the
Airport Improvement Program for Fiscal Year 1995.
The report, as required by Section 47131 of Title 49
United States Code, contains comprehensive information on
the airport improvement program.

An identical report has also been sent to the President of
the Senate.

Sincerely,

A handwritten signature in cursive script, which appears to read "Federico Peña".

Federico Peña

Enclosure

FOREWORD

This annual report of the Airport Improvement Program (AIP) for the fiscal year (FY) ending September 30, 1995, is the 14th report of activity required by Section 47131 of Title 49, United States Code.* The current grant program, known as the Airport Improvement Program, was established by the Airport and Airway Improvement Act of 1982. It authorized funding for the AIP from the Airport and Airway Trust Fund for airport development, airport planning, and noise compatibility planning and programs.

Along with meeting statutory requirements, this report will attempt to focus the attention of its readers on the goals the Federal Aviation Administration (FAA) is striving to meet with the AIP. It also details the mechanics of administration of the AIP and the methods used to accomplish these objectives.

This year's report will include additional narrative pertaining to the Passenger Facility Charge (PFC) program to highlight the increasing importance of the PFC revenue stream in the financing of airport improvements.

This report will also describe some management initiatives being taken to make the administration of the airport financial assistance programs more effective. These initiatives include the use of investment criteria, implementation of a revised priority system, movement toward a greater use of benefit and cost analysis techniques, development of AIP performance goals and measurement of accomplishments, and the use of the Airport Capital Improvement Plan to identify future airport development needs. Future annual reports to Congress will provide specific information on FAA's application of these initiatives and their impacts.

The enactment of the AIP Temporary Extension Act of 1994 on May 26, 1994, and the Federal Aviation Administration Authorization Act of 1994 (FAA Authorization Act), extended authority to

*Under Public Law 103-272 (July 5, 1994), the Airport and Airway Improvement Act of 1982 and other transportation laws were consolidated in a new Codification of Certain Transportation Laws as Title 49, United States Code.

award grants through FY 1996. The 1994 AIP Temporary Extension Act also instituted a number of changes in the allocation of AIP funds. The primary changes included: reduction of the set-aside for reliever airports from 10 percent to 5 percent and for nonprimary commercial service airports from 2.5 percent to 1.5 percent; an increase in the set-aside for integrated airport system planning from 0.5 percent to 0.75 percent; an increase in the minimum entitlement for primary airports from \$400,000 to \$500,000; expansion of the eligibility of terminal development to include reliever airports; and authority for use of *discretionary* funds for terminals at nonhub primary airports.

Also included in the 1994 AIP Temporary Extension Act were two important provisions affecting the distribution of AIP funds. The first caps the total amount of passenger and cargo apportionments at 44 percent of the total of AIP if any other legislation makes less than \$1,900 million AIP funds available for that fiscal year. The second guarantees a minimum of \$325 million in discretionary funds and requires all apportionments (except the alternative apportionment for Alaska) and all set-asides be reduced by the same percentage to achieve this amount.

The FAA Authorization Act authorizes the extension of the AIP through FY 1996 and includes several other provisions that change the way AIP can be administered. The major changes include the following: an increase in the number of airports which may be designated to participate in the Military Airport Program from 12 to 15; permission for States to sponsor diverse work items for one or more airports; the making of universal access control systems and explosives detection devices eligible under AIP; the establishment of uniform percentages for the Federal share for all types of development and planning, based on airport size (75 percent for large and medium hubs; 90 percent for all others) except at large and medium hub airports where noise projects will still be funded at 80 percent; and redefinition of letters of intent to include use of current year funds in establishing the total project commitment and the period of duration.

The FAA Authorization Act also affects the PFC Program. New provisions allow the use of PFC collections to be used to comply with the requirements of the Americans with Disabilities Act of 1990, the Clean Air Act, and the Federal Water Pollution Control Act. Another provision stipulates that PFC projects may be approved only if adequate aeronautical justification exists and can be documented. The

Act also requires a study to document the effectiveness of accounting for PFC collections and restricts PFC collection on free travel by passengers who have earned and are using frequent flyer awards.

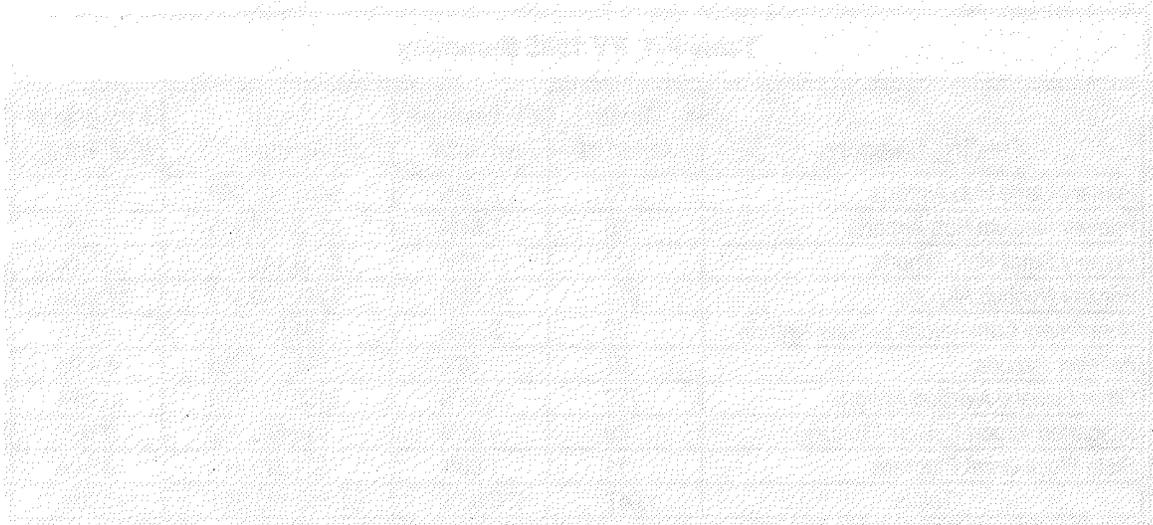

In FY 1995, new AIP grants amounting to nearly \$1,418.2 million were awarded to 1,047 airports. When combined with *amendments to previously awarded grants*, the total amount of obligated funds for the year was nearly \$1,500.8 million. Table F-1 depicts only the new grants awarded for the various funding categories:

Funding Category	Grants Awarded	Percentage of Total	Grant Amounts	Percentage of Total
Primary Large Hub Airports	76	7.26%	\$433,502,990	30.57%
Primary Medium Hub Airports	80	7.64%	\$208,593,915	14.71%
Primary Small Hub Airports	122	11.65%	\$196,142,052	13.83%
Primary Nonhub Airports	278	26.55%	\$241,160,101	17.00%
Nonprimary Commercial Service Airports	37	3.53%	\$34,530,474	2.43%
Reliever Airports	97	9.26%	\$86,700,255	6.11%
Other General Aviation Airports	297	28.37%	\$155,122,766	10.94%
Integrated Airport System Planning	49	4.68%	\$10,801,252	0.76%
State Block Grant Program	11	1.05%	\$51,629,443	3.64%
Totals	1,047	100.00%	\$1,418,183,280	100.00%

During the 14 years of AIP, 16,571 grants have been awarded for a total of nearly \$17,557 billion. Figures B-1 and B-2 are included in Appendix B, and show, by airport funding category, the cumulative number of grants awarded and the cumulative amounts of funds associated with these grants. Following these figures is Table B-1 which shows the types of airport development and planning grants plus the AIP funds associated with these grants over the life of the AIP.

FOURTEENTH ANNUAL REPORT OF ACCOMPLISHMENTS UNDER THE AIRPORT IMPROVEMENT PROGRAM

Section 47131 of Title 49 United States Code requires the Secretary of Transportation to submit an annual report to Congress describing the accomplishments of the airport grant program. This report covers activities for the fiscal year ending September 30, 1995.

INTRODUCTION

The Airport Improvement Program (AIP) and the Passenger Facility Charge (PFC) Program are administered in the Federal Aviation Administration (FAA) by the Office of the Associate Administrator for Airports. The Airports organization is composed of a staff of dedicated professionals in the Headquarters and nine regional Airports divisions, six of which have district and field offices. The Headquarters staff develops policy for the effective utilization of AIP funds and provides technical, planning, and administrative guidance to the other Airports offices. Most of the day to day decision making for AIP project formulation is delegated to the regional, district, or field level. The managers and their staffs have diverse backgrounds, including many individuals with expertise in planning, engineering, accounting, and administrative functions. Together, this team of Airports professionals consistently manages the AIP funds made available each year by Congress. For PFCs, the delegation for approval has not been given to the field. However, as with the AIP, field input is vital to the Headquarters staff for approval of collections and use of PFCs.

The administration of the AIP is complicated by the dictates of formulas and program set-asides contained in legislation. Decisions on distribution of funds are made at Headquarters, with significant input by subordinate offices. Projects identified for receipt of funds are carefully scrutinized to ensure they are justified based on aeronautical demand. They must also meet established selection criteria imposed by Congress in enabling legislation. These mandates are further refined by the Headquarters' Airports organization and disseminated to the field through program guidance and design criteria. Adherence to

these directives is monitored to ensure conformity and consistency nationwide.

Although past actions employed to administer the AIP have been highly successful, the Airports organization is open to opportunities for improvement. Currently, there is an effort to more clearly define current and future aeronautical needs. One tool being developed and used is the Airport Capital Improvement Plan (ACIP). This tool provides a better selection process for distribution of AIP funds to the projects that have the greatest potential for improving the National system of airports. There are other initiatives being considered to further improve the way projects are evaluated and funding decisions are made. These include the use of financial analysis techniques. Although they have been used to a limited degree, they are expected to have more significance in subsequent years. A summary of these initiatives will be discussed later in this report.

HISTORY IN THE MAKING

May 13, 1946 was the date on which President Truman signed the Federal Airport Act of 1946. This Act established a Federal airport grants-in-aid program known as the Federal Aid to Airports Program (FAAP). The Act's goal was to promote the development of a civil system of airports nationwide. Funds were appropriated from the general fund of the Treasury. The FAAP remained in place until replaced in 1970 by the Airport and Airway Development Act of 1970.

From this beginning 50 years ago, the Nation's airports have benefited through the infusion of Federal funds to augment local resources. They have also been aided by aviation grant specialists who have been charged with administration of this and subsequent grants-in-aid programs. Plans are underway to recognize some of these aviation grants pioneers and to identify how their contributions have benefited civil aviation. Much credit is due to all individuals involved in administration of airport grant programs since the beginning of the FAAP in 1946. Activities during calendar year 1996 will focus attention on accomplishments, recognition of former and current employees, and directions for the future.

POLICY

The highest aviation priority of the United States is the safe operation of the airport and airway system. In the administration of the Airport

Improvement Program, the FAA supports this policy by giving the highest priority to projects that enhance the safety of our airport system. Other major policy objectives are advanced by assigning high priority in the award of AIP funds to projects that maintain current airport infrastructure and increase the capacity of facilities to accommodate growing passenger and cargo traffic. The United States aviation policies are strengthened by statutory provisions which direct specific funding resources to help minimize current and projected noise impacts; convert available former military air bases to civil use; identify active military bases where joint-use is appropriate and provide funds for civilian facilities; and to develop a system of reliever airports for the relief of congestion at commercial service airports.

Section 47103 of Title 49 U.S.C. requires the Secretary of Transportation to publish a national plan for the development of public-use airports in the United States. This biennial plan, the National Plan of Integrated Airport Systems (NPIAS), emphasizes system planning and developments to meet current and future needs. It lists development considered necessary to provide a safe, efficient, and integrated airport system meeting the needs of civil aviation, national defense, and the postal service. An airport must be included in this plan to be eligible to receive a grant under AIP. The latest published edition of the NPIAS covering 1993-1997 was transmitted to Congress on April 7, 1995. The NPIAS data base is updated on a continuing basis as airport development needs change. The current plan contains a total of 3,573 airports. There are 3,329 airports existing now and another 244 new airports have been identified as being needed in the near future to meet anticipated aeronautical demands nationwide.

FY 1995 SUMMARY OF FINANCIAL ASSISTANCE

In FY 1995, gross AIP obligations amounted to \$1,500.8 million, of which \$1,418.2 million was for 1,047 new grant agreements and \$82.6 million for increases in existing grant agreements. Although the amount appropriated by Congress to be obligated for awarding grants for FY 1995 was \$1,450 million, the FAA is also authorized to use funds recovered from downward adjustments to prior year projects in new projects and for increases in the Federal amount for existing grants.

New grants awarded this fiscal year included the following: 556 grants for nearly \$1,079.4 million for primary airports; 37 grants for slightly more than \$34.5 million for other nonprimary commercial service air-

ports; 97 grants for \$86.7 million for reliever airports; 297 grants for \$155.1 million for general aviation airports; 49 grants for \$10.8 million for integrated airport system planning; and \$51.6 million for 11 State Block Grant Program grants.

There was \$163.2 million awarded for 69 grants to achieve noise compatibility. This amount included \$90.1 million for the purchase of noise-impacted land adjacent to airports, \$68.1 million for sound-proofing residences and schools, and \$5.0 million for other efforts to reduce noise.

The following sections outline the general and specific aspects of the administration of the airport grant program. These discussions reflect direction of Congress contained in authorizing legislation. The narrative sections, figures, and tables attempt to place the significance of the FY 1995 program year in better perspective.

AIRPORT IMPROVEMENT PROGRAM

Section 47104 of Title 49 U.S.C. authorizes the Secretary of Transportation to make project grants for airport planning and development under the AIP to maintain a safe and efficient nationwide system of public-use airports that meets both present and future needs of civil aeronautics. Current legislation provides AIP grant authority through the end of FY 1996.

AIRPORT CATEGORIES

The general definition in legislation refers to an airport as any area of land or water used or intended to be used for the landing or taking off of aircraft and includes, within the five categories of airports listed below, special types of facilities such as seaplane bases and heliports.

The statute further defines airports by categories which include commercial service, primary, cargo service, reliever, and general aviation airports. They are defined as follows:

- **Commercial Service Airports** are publicly owned airports that have at least 2,500 passenger boardings each year and receive scheduled passenger service. **Passenger boardings** refer to revenue passenger boardings on an aircraft in service in air commerce. The definition also includes passengers who continue on an aircraft in international flight that stops at an airport in any of the 50 states for

a nontraffic purpose. *Passenger boardings* at airports that receive scheduled passenger service are also referred to as *Enplanements*.

- ◆ *Nonprimary Commercial Service Airports* are *Commercial Service Airports* that have at least 2,500 and no more than 10,000 passenger boardings each year.
- ◆ *Primary Airports* are *Commercial Service Airports* that have more than 10,000 passenger boardings each year. These airports are further categorized as *Hub Airports*, based on the level of *passenger boardings*. Hub categories for *Primary Airports* are defined as a percentage of total *passenger boardings* in the most current calendar year ending before the start of the current fiscal year. For FY 1995, calendar year 1993 data is used since the current fiscal year began nine months after the end of CY 1993. Table 1 depicts the definition and formulae used for designating *Primary Airports* by *Hub Type*:

Table 1 Hubs Defined by Current Boardings	
Airport Hub Type	Percentage of Annual Passenger Boardings (Enplanements)
<i>Large</i>	1% or more
<i>Medium</i>	at least 0.25%, but less than 1%
<i>Small</i>	at least 0.05%, but less than 0.25%
<i>Nonhub</i>	more than 10,000, but less than 0.05%

- *Cargo Service Airports* are airports that, in addition to any other air transportation services that may be available, are served by aircraft providing air transportation of only cargo with a total annual landed weight of more than 100 million pounds.
- *Reliever Airports* are airports designated by the FAA to relieve congestion at a *Commercial Service Airport* and to provide more general aviation access to the overall community.
- The remaining airports, while not specifically defined in Title 49 U.S.C., are referred to as *General Aviation Airports* and comprise the largest single group of airports in the US airport system.

COLLECTION OF PASSENGER BOARDING AND CARGO DATA

A document containing annual passenger boardings and revenue cargo data by all cargo aircraft is published annually by the FAA's Office of the Associate Administrator for Airports. The complete report is available from the Department of Commerce's National Technical Information Service for a fee. Pertinent data from the publication is included in this annual report. The data in the publication is obtained from the Air Carrier Activity Information System (ACAIS). The data is subsequently used to determine formula distributions of annual funds appropriated for the AIP.

Passenger boarding data is derived from a variety of sources. US scheduled and nonscheduled large certificated air carriers submit passenger boarding data to DOT on Form 41, Schedule T-100. Foreign flag air carriers submit data to DOT on Form 41, Schedule T-100(F). Commuter and small certificated air carriers submit data to DOT on Form 298-C, Schedule T1 and E1. In addition, FAA conducts an annual survey of air taxi/commercial operators who report their non-scheduled activity on FAA Form 1899-31.

The passenger boarding data obtained from these sources for calendar year 1993 was merged into the ACAIS database, which was then reviewed by FAA staff and individual airport operators. Erroneous or inconsistent data was coordinated with the air carriers. If warranted, appropriate revisions were made before the data was finalized. This data was then used to determine formula distributions of funds for FY 1995.

For AIP purposes, enplaned passengers also include those passengers on board international flights that stop at airports located in the 50 states for non-traffic purposes. In calendar year 1993, this amounted to 1,922,411 additional passengers at 6 airports. These airports were Honolulu, HI; Bangor, ME; Anchorage, AK; Port Angeles, WA; Bellingham, WA; and Laredo, TX.

In 1990, Congress enacted legislation that allows public agencies controlling commercial service airports to charge enplaning passengers using the airport a \$1, \$2, or \$3 passenger facility charge (PFC). Public agencies wishing to impose a PFC must apply to the FAA for such authority and meet certain requirements. Large and most medium hub airports implementing a PFC are assessed up to a 50 percent reduction in apportionments. For FY 1995, 43 large and medium hub airports had their apportionments reduced.

Data from all-cargo carriers was compiled for airports with a minimum of 100 million pounds of landed weight annually. The cargo carriers report the landed weight of all-cargo aircraft to the airport operator, who completes FAA Form 5100-108 and submits it to FAA.

The FAA compiled and merged the data into the ACAIS database. As with passenger boarding data, the data was then reviewed by FAA staff and individual airport operators. Erroneous or inconsistent data was coordinated with the air carriers. If warranted, appropriate revisions were made before the data was finalized. This data was then used to determine formula distributions of cargo funds for FY 1995.

The compiled data used to determine FY 1995 formula distributions is shown in the following tables (Tables 2, 3, 4, and 5). The data shown includes both calendar years 1992 and 1993 for comparison. These totals were used to compute the formula distributions for FY 1994 and FY 1995, respectively.

Table 2 Comparison of Prior Year to Current Year Boardings

<i>Changes in Passenger Boardings (By Airport Type, Compared to Previous Year)</i>						
Airport Types	<i>CY 1992 Airports</i>	<i>CY 1993 Airports</i>	<i>Percent Change</i>	<i>CY 1992 Boardings</i>	<i>CY 1993 Boardings</i>	<i>Percent Change</i>
Primary, Large Hub	28	27	-3.57%	337,662,295	341,729,124	1.20%
Primary, Medium Hub	37	38	2.70%	108,170,558	118,290,399	9.36%
Primary, Small Hub	84	83	-1.19%	48,844,467	49,045,057	0.41%
Primary, Nonhub	274	269	-1.82%	17,815,654	18,193,093	2.12%
Subtotal Hubs	423	417	-1.42%	512,492,974	527,257,673	2.88%
Nonprimary, Other Commercial Service	128	149	16.41%	602,541	726,543	20.58%
Other Than Commercial Service	1270	1,137	-10.47%	955,550	936,280	-2.02%
Total	1,821	1,703	-6.48%	514,051,065	528,920,496	2.89%

Table 3 focuses on the break down of the passenger boarding data as it applies to the FY 1995 designation of commercial service airports.

Table 3 Application of Formulae to Current Year Boardings to Determine Hubs

*Commercial Service Airports Primary and Nonprimary Hub Categories
Based on CY 1993 Total Passenger Boardings of 528,920,496*

Type Commercial Service Airports	CY 1993	Formula	Lower Limit	Upper Limit
Primary, Large Hub	27	1.0% or more	5,289,205	NA
Primary, Medium Hub	38	at least 0.25%, but less than 1.0%	1,322,301	5,289,204
Primary, Small Hub	83	at least 0.05%, but less than 0.25%	264,460	1,322,300
Primary, Nonhub	269	more than 10,000, but less than 0.05%	10,001	264,459
Nonprimary, Other Commercial Service	149	at least 2,500, and no more than 10,000	2,500	10,000
Total	566			

88% of Passengers are Boarded at the Top 65 Airports (Large and Medium Hubs)

As shown above, there was a small increase in passenger boardings, but there was also a reduction in the number of hub type airports providing qualifying passenger service. The greatest increase in both qualifying airports and passenger boardings was in the nonprimary commercial service airport category.

The data in Table 4 shows how the passenger boardings were distributed between various types of operations.

Table 4 Passenger Boardings

*Various Arrays of Passenger Boardings Data
Based on CY 1993 Total Passenger Boardings of 528,920,496*

	<i>Passenger Boardings</i>	<i>Percent of Total</i>		<i>Passenger Boardings</i>	<i>Percent of Total</i>
<i>Air Taxi Operators</i>	663,618	0.13%	<i>Domestic</i>	483,502,222	91.41%
<i>Commuter Carriers</i>	36,673,184	6.93%	<i>International</i>	45,418,274	8.59%
<i>Large Certificated Carriers</i>	468,225,957	88.52%	Total	528,920,496	100.00%
<i>Foreign Flag Carriers</i>	21,435,326	4.05%	<i>Scheduled</i>	514,989,887	97.37%
<i>Intransit Operations</i>	1,922,411	0.36%	<i>Non-Scheduled</i>	13,930,609	2.63%
Total	528,920,496	100.00%	Total	528,920,496	100.00%

Pertinent cargo data for the current fiscal year is included in Table 5 below.

Table 5 Cargo Landed Weight

*CARGO AIRPORTS ACTIVITY
Based on CY 1993 Landed Weight*

There were 94 Qualifying Cargo Airports
They recorded a Total Landed Weight of 97 Billion Pounds of Cargo
Seven New Airports Qualified this Fiscal Year.
All airports that qualified in prior years qualified this Fiscal Year.
There was a 5.14% Growth in Total Landed Weight this Fiscal Year

ANNUAL AUTHORIZATION

Historical AIP authorization and obligation levels from FY 1982 through FY 1995, and the authorized level for FY 1996 are shown in Figure 1 as follows:

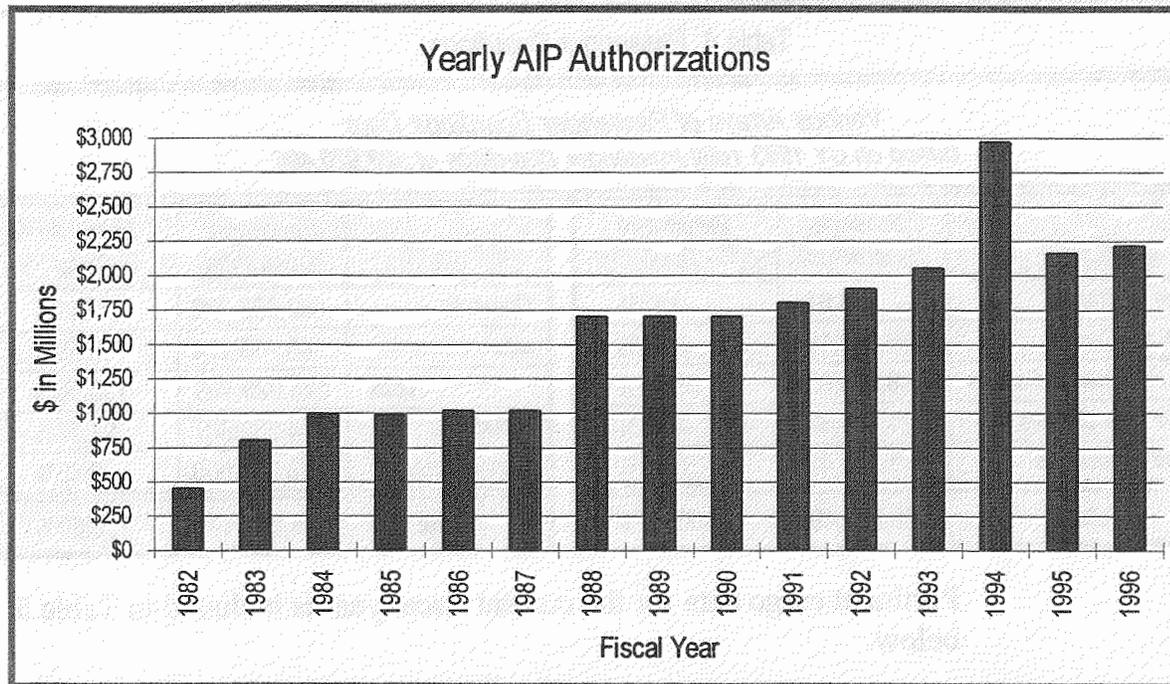

Figure 1 Annual Airport Improvement Program Authorizations

As shown, the amounts authorized for the AIP rose from \$450 million in FY 1982 to \$2,970* million in FY 1994. The amount authorized in FY 1995 was \$2,160 million. However, Congress generally limits annual obligations to less than that authorized. Thus, the amounts available for obligation rose from \$450 million in FY 1982 to \$1,900 million in FY 1992, then fell to \$1,800 million in FY 1993, to \$1,690 million in FY 1994, and \$1,450 million in FY 1995.

The amounts available for obligation fall into two basic categories: apportioned funds and discretionary funds. Funds apportioned to airports may generally be used for any eligible airport planning or development; other funds are approved for use on projects after consideration of project priority and other selection criteria.

* According to the Office of Management and Budget, with concurrence by the Congressional Budget Office, the total amount authorized in fiscal year 1994 was \$2.97 billion, even though it appeared that \$2.161 billion was the amount authorized. This was due to the combination of the lapse of authority of AIP after fiscal year 1993 and the amendments extending the program in May 1994 and August 1994.

DISTRIBUTION OF APPORTIONED FUNDS

Statutory provisions require that AIP funds be apportioned by formula each year to specific airports or types of airports. Such funds are available to airports in the year they are first apportioned and they remain available for the two fiscal years immediately following.

Among the recipients of apportioned funds are primary airports, cargo service airports, States and insular areas, and Alaska.

Not more than 49.5 percent of the annual amount made available for obligation may be apportioned to primary and cargo service airports. Of that percentage, 3.5 percent is apportioned to cargo service airports. However, in the event that an amount less than \$1.9 billion is made available for obligation under AIP, not more than 44 percent can be apportioned to these airports in accordance with section 47114 of Title 49 U.S.C.

PRIMARY AIRPORTS

For FY 1995, there were 417 primary airports. These airports boarded 527,257,673 passengers in CY 1993, the year used to determine FY 1995 primary airport apportionments. Each primary airport apportionment is based upon the number of passenger boardings at the airport. If full funding is made available for obligation, the minimum amount apportioned to the sponsor of a primary airport is \$500,000, and the maximum is \$22,000,000. These funds are calculated as follows:

- \$7.80 for each of the first 50,000 passenger boardings
- \$5.20 for each of the next 50,000 passenger boardings
- \$2.60 for each of the next 400,000 passenger boardings
- \$0.65 for each passenger in excess of 500,000 passenger boardings

For FY 1995, \$1,450 million was made available for obligation. Since less than \$1,900 million was made available for obligation in FY 1995, all airport apportionments in FY 1995 were subject to reduction to conform with the combined limit of 44 percent of total available AIP. There was a 12.41 percent reduction in apportionments to ensure the formula apportionments did not exceed 44 percent of the \$1,450 million made available. A further 13.68 percent reduction was applied to all primary airport apportionments to ensure that

\$325 million was available for discretionary grants (see page 13, "Minimum Discretionary Fund"). As a result, the combined total reduction was 24.35 percent. Therefore, the minimum apportionment for primary airports was reduced to \$378,246. The 417 primary airports were apportioned a combined total of \$412,035,885. Table B-2 provides a summary of the application of reduction criteria and the resultant impact in FY 1995 based on an obligation limitation of \$1,450 million.

CARGO SERVICE AIRPORTS

For FY 1995, 94 airports qualified as cargo service airports. The 3.5 percent of AIP is apportioned to each cargo service airport in the same proportion as its proportion of landed cargo weight to the total landed cargo weight at all qualifying airports. No cargo service airport is entitled to more than 8 percent of the total amount apportioned to all cargo service airports. As with primary airports, apportionments to cargo service airports were reduced uniformly by a total of 24.35 percent in FY 1995.

STATES/INSULAR AREAS

A total of 12 percent of the annual amount made available for obligation is apportioned for use at general aviation and reliever airports within the States and insular areas. Of this 12 percent, 99 percent is apportioned for airports within the 50 States, the District of Columbia, and Puerto Rico, while the remaining 1 percent is apportioned for airports in the insular areas (Guam, American Samoa, the Commonwealth of the Northern Mariana Islands, the Trust Territory of the Pacific Islands, and the Virgin Islands).

ALASKA SUPPLEMENTAL FUNDS

Funds are apportioned for certain Alaskan airports to ensure that at least the amount they were apportioned in FY 1980 under previous grant-in-aid legislation is made available to airports in Alaska. This requirement provided an additional \$10.5 million for Alaskan airports in FY 1995.

DISTRIBUTION OF DISCRETIONARY FUNDS

The remaining funds are defined as discretionary, but sizable portions are set-aside to achieve specified funding minimums. A minimum (based upon a percentage of total amounts made available for AIP) of:

- 5 percent of all funds is used for reliever airports;
- 1.25 percent is used for nonprimary commercial service airports;
- 12.5 percent is reserved for noise compatibility planning and implementing noise compatibility programs under Section 47501 et seq. of Title 49 U.S.C. (formerly the Aviation Safety and Noise Abatement Act of 1979);
- 0.75 percent is used for the preparation of integrated airport system plans; and
- 2.5 percent is used for the Military Airport Program.

Of the remaining discretionary funds, 75 percent is to be used for preserving and enhancing capacity, safety, security, and carrying out noise compatibility planning and programs at primary and reliever airports. The remaining 25 percent may be used for any eligible project at any airport.

MINIMUM DISCRETIONARY FUND

Congress specified, beginning in FY 1994, that not less than \$325 million remain in discretionary funds after all apportionments and set-asides are satisfied. If less than this amount remains, all apportionments (except that for Alaska supplemental funds) and set-asides are to be reduced by the same percentage to ensure that \$325 million be available for discretionary grants. In FY 1995, a reduction of 13.68 percent was applied to provide the required \$325 million.

RATE OF PARTICIPATION

At primary airports which annually enplane 0.25 percent or more of the total number of passengers enplaned at all US airports (1,322,302 or more enplanements for FY 1995), the Federal share is 75 percent of the total allowable project cost, except for project grants to implement noise compatibility projects as authorized by the Section 47501 et seq. of Title 49 U.S.C., which are funded at 80 percent. At all other air-

ports, the Federal share is 90 percent of the total allowable project cost for all projects. There are upward adjustments for projects in States containing high percentages of public lands. Grants for integrated airport system planning are for 90 percent of allowable planning costs.

INVESTMENT CRITERIA

The FAA's policy in selecting projects for AIP grants is intended to ensure uniform levels of airport system safety, quality, and performance for passengers, shippers, and aircraft operators throughout the Nation and to improve the effectiveness of AIP investments in meeting critical needs of the national airport system.

The AIP grant award selection process is based on Executive Order 12893, "Principles for Federal Infrastructure Investments," and guidance provided in Congressional hearings regarding the use of national priority and economic analysis in evaluating Federal investment in airport infrastructure. Procedures involve: establishment of national airport investment objectives; consistent ranking of grant applications among FAA regions by type of project; use of national threshold priority system scores for award consideration; and application of benefit/cost analysis to any project intended to preserve or enhance capacity for which the total value of requested discretionary capacity grants is expected to equal or exceed \$10 million over the life of the project.

PERFORMANCE GOALS AND MEASURES

The FAA has established specific national performance goals for the Airport Improvement Program. These goals are targeted to the areas of safety, security, infrastructure preservation, capacity, and environmental compatibility. The goals relate to five defined airport categories. They are large hubs; medium hubs; all other commercial service airports (small hubs, nonhubs, and remaining nonprimary commercial service airports); a combination of large general aviation and reliever airports based on higher levels of activity; and all other lower activity general aviation airports.

The effort to identify work needed to attain these goals was begun in FY 1995, and an inventory was conducted to determine the progress made by the end of the fiscal year. This is the baseline from which goals will be measured in subsequent years. The initial measurements were limited to certain airport categories only. In subsequent years ad-

ditional airport categories and development items will be added to the goals identified for tracking. The FY 1995 measurements related to two performance categories in safety, one in capacity, and one in environmental compatibility. The goals, measures, and findings are as follows:

SAFETY

Goal: Attain 100 percent of all safety-related development identified in the statute for priority consideration. There are thirteen safety-related development items included in the AIP legislation. The initial effort focused on the large hub category of airports only and to only five development items normally funded with AIP funds. These items, 4, 8, 10, 11, and 12, are high priority for AIP funding and are shown in bold-face type in the following list. The complete list of development items specified by Congress in authorizing legislation are as follows:

1. Precision approach system for each primary runway.*
2. Vertical visual guidance system for each primary runway.*
3. Full approach lighting system for each primary runway.*
4. **Grooving or friction treatment for each primary and secondary runway.**
5. Nonprecision approach for each secondary runway.*
6. Runway end identifier lights on all runways that do not have an approach lighting system.*
7. Electronic or visual vertical guidance on all runways.*
8. **Distance to go signs for each primary and secondary runway.**
9. Surface movement radar systems at each category III (lowest operational weather minima) airport.†

* These items, although eligible for AIP, are usually installed, operated, and maintained by FAA; AIP funding is used in some instances.

† These items are not eligible for AIP funding.

10. Taxiway lighting.
11. Sign system.
12. Runway edge lighting and marking.
13. Radar approach coverage for all airport terminal areas. †

Measure: The number of safety-related development items specified in legislation that have been accomplished at the selected airports. Although not commonly found, the requirement can be satisfied by an approved substitute development item that provides a level of safety approximately equal to the standard.

Findings: 100 percent of all the Congressionally specified safety-related development items have been accomplished at all the large hub airports surveyed.

Goal: Attain 100 percent of runway safety area requirements to meet current national design criteria for air carrier runways at large and medium hub airports.

Measure: The number of runway safety areas that meet current design standards; those that have an acceptable or approved substitute measure that provides a level of safety approximately equal to the standard; and those where it is impractical or economically unfeasible to meet standards due to natural or man-made encroachments.

Findings: There were 322 airport runway safety areas on air carrier runways inventoried. The survey identified 160 of the runway safety areas as meeting current design standards. There were 62 runway safety areas identified as being impractical to be brought up to standards because of adjacent major highways; railroads; large bodies of water such as lakes, basins, rivers, lagoons; and other environmental conditions that would preclude extending the safety area. The remaining 100 upgradable runway safety areas surveyed have been targeted to be upgraded to current standards when practicable.

† These items are not eligible for AIP funding.

CAPACITY

Goal: Achieve delay reduction at capacity constrained airports identified in the Capacity Task Force Study of the top 23 congested airports. Effective use of AIP funds for feasible development projects will be provided to achieve increased capacity and resultant delay reductions within the time frames determined after the inventory is completed.

Measure: Identify progress on projects that support the recommendations of the Capacity Task Force Study. Feasible capacity projects are defined as those where a capacity enhancement will result and an annual delay reduction benefit can be expected and quantified. To be eligible for immediate funding they must meet specific criteria that indicate that significant delay reduction and capacity enhancement will be realized.

Findings: Most of the 23 locations identified by the Capacity Task Force have projects in progress. There were 22 projects underway using FY 1995 funds. These capacity enhancement projects should result in saving millions of dollars in delay costs by air carriers. Most of the top 23 most congested airports have implemented capacity projects to some degree.

ENVIRONMENTAL COMPATIBILITY

Goal: Attain 100 percent of actions identified in Airport Noise Compatibility Plans prepared under FAR Part 150, including acquisition and sound insulation of homes and public buildings at large hub airport locations. (Eligibility of sound insulation of public buildings is not limited to only those identified in an approved Part 150 Noise Plan.)

Measure: Identify the number of homes and public buildings significantly impacted by aircraft noise that have been acquired or sound insulated.

Findings: Significant progress has been made in acquiring and insulating the homes, schools, and other eligible public buildings identified in the Airport Noise Compatibility Plans. The inventory identified 11,438 homes, schools, houses of worship, and other eligible buildings in Part 150 studies that have been sound insulated. There were also 5,301 homes, schools, houses of worship, and other eligible buildings in Part 150 studies that have been acquired. There were also 218 structures insulated and 142 properties acquired outside the

Part 150 process; these projects were justified by relationship to airport development or by specific provisions in airport noise legislation.

AIRPORT CAPITAL IMPROVEMENT PLANNING (ACIP)

Formal implementation of ACIP began in 1990 after an internal FAA working group had identified problems with the means used to distribute discretionary funds. Their study resulted in Order 5100.39, Airport Capital Improvement Plan. The objective of this effort is to move AIP discretionary funding decisions to a "needs" basis to ensure that the highest national priorities are funded instead of a loosely structured method based on historical trends. The working group recommended a new priority system that would result in calculated numerical values closely aligned to needs identified in the NPIAS. The calculated priority value permits more uniform classification of projects nationwide.

The diversity of airport development makes implementation of a priority designation system difficult, but important and necessary to make prudent use of Federal funds in airport capital expenditures. Although the ACIP may be referred to as a plan for distribution of Federal funds, it is best described as a *process*. The ACIP process involves the collection, coordination, and analysis of total airport development needs before making funding decisions. To be successful, the ACIP process must be the cooperative effort of many of the diverse partners concerned with the development of our national airport system.

The primary goal of Airport Capital Improvement Planning is the development of a National airport system that reflects critical aeronautical demands and the means for funding the highest priorities using all available funding sources. Although AIP funds are emphasized, the concept applies to *all* funding sources. AIP resources represent a decreasing share of funding for airport development needs nationwide. New funding sources, such as PFC collections and innovative financing mechanisms, augment the AIP and must be considered in the decision-making process before AIP discretionary funds are awarded. Regardless of the funding source, the FAA must provide an oversight role to further the Federal interest in aviation safety and efficiency. The ACIP provides a forum whereby all funding sources and needs can be visualized, quantified, and displayed in a uniform manner. The resultant document mirrors the input of the main participants directly involved in airport development decisions.

The ACIP uses a national priority calculation that was designed to be consistent with the policy incorporated in the existing priority system. Priority numbers are calculated based on the size and type of airport and the type of project as described by project codes. While no priority system could ever perfectly describe national needs and priorities, the ACIP priority system provides a more accurate method to quantify and rank airport projects based on aeronautical demand. The process also supports the objectives of the new investment criterion policy.

The numerical priority array that results from the preparation of the ACIP is a major tool used for making final funding decisions on the distribution of AIP resources. The FAA Regional Offices are the first step in the decision-making process. They are in the best position to identify individual projects that warrant funding consideration. Their submissions are thoroughly analyzed at FAA Headquarters. The analysis for each airport/development type indicates the development needs for each. Specific projects are selected for approval to use discretionary funding in the annual program. The distribution is made first to the highest priority projects, then to succeeding lower priority projects until reaching a cut off point that delineates the extent of prudent use of funds. However, the AIP authorization requires that certain discretionary funds be made available for use in various categories (Reliever, Commercial Service, Noise, etc.). In many cases the identified development needs for specific categories may have less urgency for funding and consequently go below desired priority cut off levels. Headquarters uses an ACIP Planning Level Model to resolve these conflicts and to distribute funding between airport/development types so that distribution of funds is primarily focused on aeronautical investment priorities identified in authorizing legislation. When these conflicts are resolved, distribution is made to the remaining identified projects until achievement of full distribution of anticipated funds for the airport or development category. This process ensures national consistency in the types of projects being approved nationwide and instills confidence in the recipients of annual program funds. However, the program is still flexible enough to permit inclusion of special development project needs which warrant current consideration even though their priority has historically been rated lower than current funding levels could reach. Typical examples are capacity enhancement projects that traditionally have received less emphasis based on the limited availability of AIP funds.

AIRPORT PLANNING AND DEVELOPMENT PROCESS ACTIVITIES (APDP)

A task force of knowledgeable FAA Airports employees from Headquarters and the field offices has been involved this year in a study of ways to make the administration of the AIP grant process more efficient. Their approach to the task involves analysis of current activities, with a view toward re-engineering the process to help simplify administration of grants and the project management functions. The effort is expected to yield a more efficient organization that can free up valuable personnel resources to address the new challenges of the future. The task force has established three key goals for the new process to achieve. They are as follows:

- ➔ Reduce much of FAA's direct involvement in the administration of grants and project management by increasing the responsibility for direct control of project management through delegation of more authority to airport sponsors and state aviation organizations.
- ➔ Using techniques developed for the Airport Capital Improvement Plan (ACIP), place more emphasis on the use of multi-year airport development programs rather than specific individual projects.
- ➔ Develop techniques to accurately measure current airport system performance and to be able to predict the impact of airport development improvements, constrained by various funding scenarios.

The task force hopes to identify measures that will permit reallocation of as much as 40 percent of existing grants administration and project management personnel resources to the technical aspects involved in the airport development project formulation, consultation, coordination, and performance measurement functions. These redirected personnel resources can then concentrate on providing value added service to airport sponsors in such areas as capacity enhancement, environmental measures, and implementation and application of new technologies such as the Global Positioning Satellite Navigation System (GPS). The task force concluded the study phase in March 1995. Implementation of recommendations by the task force to change to the new process is expected to take place over a three year period, beginning in FY 1996.

ENVIRONMENTAL RESPONSIBILITIES

The FAA evaluates potential adverse environmental impacts that may result from an airport development project before approving or financing the project. This evaluation is based on requirements contained in the National Environmental Policy Act of 1969 (NEPA) and other Federal laws, regulations, and orders which detail specific criteria to be used for protecting the human and natural environment. Specific areas of environmental concern include air quality, water quality, public recreation lands, farmlands, hazardous materials, historical and archeological sites, endangered species, coastal zones, wetlands, flood plains, and noise. This evaluation process provides FAA, other Federal, State, and local agencies, and members of the public a better understanding of a proposed airport project's potential adverse environmental impacts and identifies measures to lessen or eliminate those effects.

FAA's detailed environmental evaluations, which ensure compliance with NEPA and other pertinent environmental directives, are predicated on the nature of the proposed action and the severity of its environmental impacts. FAA's Office of Airports has developed FAA Order 5050.4A, Airport Environmental Handbook, to define the scope of environmental evaluations. The Order identifies the types of airport projects that normally fit predetermined scopes of analyses, which range from limited to very comprehensive. Although there is much commonality among projects at various airports, each project is still judged on its own merits. In addition to its published airport environmental procedures, the FAA provides updated guidance to its field offices as a result of revisions in laws and regulations enacted and promulgated by Congress, the President, and other Federal agencies.

The documents resulting from environmental analyses serve to protect environmental resources when Federal actions related to airports are being considered. FAA procedures identify the types of actions that require either an environment assessment by the airport sponsor, a more detailed environmental impact statement prepared by the FAA, or a limited review based on a predefined category of excluded projects. Section 102(2)(C) of NEPA requires an environmental impact statement when a project would significantly affect the quality of the human environment. If, after detailed study, the impacts are determined to be insignificant (not exceeding any thresholds of significance set for the particular environmental issue being evaluated), an appropriate determination will be made reflecting this finding.

The environmental process is one that can range in complexity and duration. The FAA first reviews the proposed project to determine if it is one of a predefined category of excluded actions. These projects are commonly referred to as categorical exclusions (CEs). These projects normally do not significantly affect specially protected resources such as endangered or threatened species, historical properties with significant public interest for preservation, parkland, etc. If this determination can be made, no further environmental analysis is required.

If the project would adversely affect environmental resources, the FAA will assist the airport sponsor in preparing an environmental assessment (EA), based on the requirements outlined in FAA Order 5050.4A. If after reviewing the EA, the FAA concludes that the action would not significantly affect environmental resources, the FAA prepares a document known as a Finding of No Significant Impact (FONSI). On the other hand, if the project will significantly affect the environment, the FAA must further analyze the severity of the impacts and evaluate measures that could reduce or eliminate adverse degradation of ecological systems. The formal document containing this detailed study is known as an environmental impact statement (EIS) and often uses the EA prepared by the airport sponsor as the basis for further analysis. The EIS is generally prepared by FAA. However, the FAA may be assisted by an FAA-selected consultant specializing in the evaluation and assessment of environmental impacts. The result is a document that identifies the environmental impacts resulting from Federally approved or financed airport projects and discusses measures to minimize those impacts to the greatest extent possible.

NOISE COMPATIBILITY

In FY 1992, the FAA began administering new Federal Aviation Regulation (FAR) Part 161, which was issued September 25, 1991. Part 161 implements provisions of the Airport Noise and Capacity Act of 1990 (ANCA) by establishing a national program for reviewing airport noise and access restrictions on Stage 2 and Stage 3 aircraft operations. Part 161 also advises airport operators on how ANCA and Part 161 apply to the airport noise compatibility planning process conducted under FAR Part 150. The FAA has established a "team" to review airport noise and access restrictions as issues of applicability to ANCA and Part 161 are raised.

The FAA is continuing its streamlining effort for Part 150 to improve its effectiveness into the next century. A revised rule is being devel-

oped which will require airport operators to take into account the effect on the noise environment of ANCA's phase out of Stage 2 aircraft by the year 2000.

During FY 1995, FAA found 17 noise exposure maps in compliance with Part 150 and approved 19 noise compatibility programs (NCP) submitted by airport operators. These included 4 updates of programs that were previously approved by the FAA. At the close of FY 1995, 232 airports were participating in the program, 207 of them with Federal planning grants to conduct the Part 150 analysis. Almost 200 airports have approved programs successfully in place, and many have applied for funding to update their programs. Since an approved NCP is a prerequisite to receiving funds for most mitigation actions, most airport operators have participated in some level of noise planning. They view the opportunity to conduct planning and mitigation with Federal funds as a means to foster better relations with the adjacent and nearby communities.

DISADVANTAGED BUSINESS AND CIVIL RIGHTS REQUIREMENTS

Section 47113 of Title 49, U.S.C. specifies, except to the extent the Secretary decides otherwise, that at least 10 percent of funds made available for obligation be expended with small business concerns owned and controlled by socially and economically disadvantaged individuals. The Secretary has established a goal of at least 10 percent participation by disadvantaged business enterprises (DBE) in AIP projects and, at certain airports, in airport concessions. These requirements can be found in Department of Transportation Regulations at 49 C.F.R. 23.

During the past fiscal year, DBE's received 23.3 percent of contract dollars awarded under the AIP. Of this amount, 6.4 percent was awarded to female-owned firms, while 16.9 percent was awarded to firms owned by minorities or other disadvantaged individuals. DBE concessionaires earned 8.3 percent of the total gross receipts generated by all concessions at primary airport locations.

During FY 1995, FAA regional civil rights staffs completed twelve desk audits and on-site compliance reviews under the departmental rule. Civil rights staffs conducted three reviews for compliance with Title VI of the Civil Rights Act of 1964. Two formal complaints (which are still under investigation) were filed under the DBE rule; no complaints were filed under Title VI.

PASSENGER FACILITY CHARGE PROGRAM

The Passenger Facility Charge (PFC) Program, first authorized by the Aviation Safety and Capacity Expansion Act of 1990, provides a source of additional capital funding for expansion and repair of airport infrastructure in the national air transportation system. This legislation allows public agencies controlling commercial service airports, after receiving approval from the FAA, to charge enplaning passengers using the airport a \$1, \$2, or \$3 facility charge. In FY 1995, FAA approved 31 new locations to collect PFC's. As of September 30, 1995, authorized PFC collection for the 234 approved locations totaled over \$11,800 million.

As of September 30, 1995, 54 percent of those primary airports eligible to collect PFC's were approved to do so. Nonprimary commercial service airports are not included in this calculation since, of these airports, only seven have been approved to collect PFC's and the revenue derived from this collection is very small when compared to the revenue derived from collections at larger airports.

PFC collections and AIP funds are complementary in the overall funding of airport improvements. The majority of PFC approved projects are also eligible under the AIP. One primary use of PFC funds allowed at nonhub primary airports is use for the local "match" funds for AIP grants. Figure B-3 illustrates the manner in which AIP funds and PFC revenues are used and compares the types of development items funded by each fund source.

Section 47114(f) of Title 49 U.S.C. requires that AIP funds apportioned to a large or medium hub airport (one at which passenger enplanements are at least 0.25 percent of the US total) be reduced if a PFC is imposed at that airport. This reduction takes place in the fiscal year following the approval of authority for PFC collections at that airport and continues in each succeeding fiscal year in which a PFC is imposed. The apportionment for a fiscal year is reduced by 50 percent of the forecast PFC revenue in that fiscal year, but not to exceed 50 percent of the earned apportionments for that fiscal year. In FY 1995, 43 large and medium hub airports were subject to these reductions.

The apportionments that are withheld as a result of PFC collections are distributed within the AIP program as follows:

- a) 25 percent to the AIP discretionary fund; and
- b) 75 percent to the "small airport fund."

Of the 25 percent distributed to the discretionary fund, half of the amount (one-eighth of the total) must be spent at small hub primary airports.

Of the 75 percent distributed to the "small airport fund," one-third (one quarter of the total) is distributed to general aviation (including reliever) airports. The remaining two-thirds (one half of the total) is distributed to nonhub commercial service airports.

As a result of these distributions, FY 1995 AIP funds of \$12.6 million went to small hub airports, \$50.2 million went to nonhub airports, and \$25.1 million went to the remaining noncommercial, reliever and general aviation airports. Table B-2 depicts the total effect of these returns.

STATE BLOCK GRANT PROGRAM

The State Block Grant Program is implemented by FAR Part 156. Under this regulation, States assume responsibility for administration of AIP grants at airports classified as "other than primary". This program, authorized through September 30, 1996, became effective October 1, 1989, and now includes seven States: Illinois, Missouri, North Carolina, Michigan, New Jersey, Texas, and Wisconsin.

These block grant states administer funding of nonprimary commercial service, reliever, and general aviation airports. Each State is responsible for determining which locations within its jurisdiction will receive funds and for ongoing project administration. A total of \$51.6 million, including \$20.5 million discretionary, was granted to the block grant states in FY 1995 as follows: Illinois, \$8.6 million; Michigan, \$10.9 million; Missouri, \$8.9 million; New Jersey, \$3.6 million; North Carolina, \$4.6 million; Texas, \$10.7 million; and Wisconsin, \$4.3 million. For the period the pilot program has been effective, \$371.1 million, including \$211.2 million discretionary, has been issued as block grants.

MILITARY AIRPORT PROGRAM

The Military Airport Program (MAP) has been in existence since FY 1991. Legislation now permits designation of 15 current or former military airports to be eligible for MAP funds, but only if these airports can be shown to improve the capacity of the national air transportation system. Specifically, the new criteria requires that approved projects at any newly designated MAP location must be able to reduce delays at an existing nearby commercial service airport that has more than 20,000 hours of annual delays in commercial passenger aircraft takeoffs and landings. To be selected, the potential MAP airport sponsors must provide data in their applications to show how their projects will reduce delays. The designated airports remain eligible to participate in the program for 5 fiscal years following their initial designation as participants.

To date, a total of 17 major military airfields identified in the 1988, 1991, and 1993 Defense Base Closure and Realignment Commission reports have been converted to civil use. Of these new airfields, 4 are currently in the MAP. They are as follows: San Bernardino International Airport (former Norton, AFB), CA, Agana (former Naval Air Station Agana), Guam, Pease International Tradeport (former Pease AFB), NH, and Myrtle Beach Jetport (former Myrtle Beach AFB), SC. Agana, Myrtle Beach and Pease are primary airports and San Bernardino is a reliever for Los Angeles and Ontario. The conversion and designation of these four closing military airfields have resulted in adding to the civil inventory 4 major runways, ranging from 8,000 to 11,000 feet long and capable of accommodating the largest aircraft in the civil fleet.

No less than 2.5 percent in FYs 1994, 1995, and 1996 of available AIP funds will be set-aside for the designated airports. A total of \$31.3 million of discretionary funds was available and obligated at 12 designated current and former military airfields in FY 1995. The locations and discretionary amounts granted to these airports are shown in Table 6.

These airports contribute to the capacity of the national air transportation system by enhancing airport and air traffic control system capacity in their respective metropolitan areas, as well as by reducing current and projected flight delays. The projects approved for these airports included land acquisition; security improvements; runway,

apron, and taxiway construction and improvements; lighting and terminal development, and other conversion-related projects.

Conversion related projects are especially important to the newly converting bases. These bases can contribute significantly to the national air transportation system by providing the infrastructure upon which to build. To duplicate this investment in infrastructure with AIP funds would quickly deplete all appropriated funds for many years to come. However, these bases still require significant amounts of AIP to be properly retrofitted for civilian use. Terminal buildings are not normally found on military bases and must be constructed to provide adequate facilities for movement of passengers. This can represent a major investment cost for conversion.

Table 6 Military Airport Program Selected Locations and Funds Awarded	
<i>Location</i>	<i>MAP Funds</i>
Stewart International Airport, NY	\$5,000,000
Lincoln Municipal Airport, NE	\$618,087
Manchester Municipal Airport, NH	\$1,431,000
Mid-America Airport, IL (Scott AF Base)	\$5,000,000
Pease International Tradeport, NH	\$4,000,000
Myrtle Beach Airport, SC	\$1,429,913 [§]
Smyrna Airport, TN	\$530,000
Albuquerque International Airport, NM	\$1,000,000
Ellington Field, TX	\$3,160,000
Laredo International Airport, TX	\$5,000,000
Agana International Air Terminal, Guam	\$3,000,000
San Bernardino International Airport, CA	\$1,220,000
TOTAL	\$31,389,000

[§]Includes new project for \$1,218,000 in FY 95 and \$211,913 in FY 95 funds to increase an FY 91 project.

Significant MAP projects funded in FY 1995 are summarized below:

- Grants were made to Myrtle Beach Jetport for expansion of the passenger terminal, improvements to the fuel farm, construction of a Federal inspection facility, and acquisition of loading bridges. Myrtle Beach experienced a 40% passenger growth from 1995 over 1994. These improvements permit the airport to serve Air South, Continental, Myrtle Beach Jet Express, Spirit, and Atlantic Southeast Airlines in addition to serving international passengers.
- Grants were made to Laredo for construction of a new terminal building on the east side of the airport. This new and larger facility also includes a Federal inspection facility that will permit the airport to serve flights to and from Mexico. The space vacated when the terminal building was constructed will permit expansion of cargo facilities.
- Grants funds were made available to Mid America Airport (Scott Air Force Base), Illinois for acquisition of development land, installation of signs, and acquisition of aircraft rescue and firefighting vehicles needed to comply with FAR Part 139 for limited air carrier operations. The civilian portion of the airport is a designated reliever for Lambert St. Louis.

MAJOR CAPACITY, SAFETY, AND SECURITY PROJECT GRANTS

During FY 1995, \$252.6 million of discretionary funds were awarded in grants to enhance or preserve the capacity, safety, and security of the Nation's airports. These grants provided Federal funding for projects to construct and improve runways, taxiways, air carrier aprons, and terminals at many capacity-constrained airports. A short description of a few of these significant projects follows:

- Runway capacity at **Philadelphia International Airport** is constrained, resulting in high levels of aircraft delay. Construction of a new 5000 foot commuter runway is underway and eventually will improve IFR capacity. The total estimated cost of the runway is \$221 million. Funding sources include AIP (\$80 million), PFC (\$26 million), and local funds(\$115 million). Three AIP grants have been awarded for about \$29 million. FY 1995 grants were \$13,170,377 and \$1,721,531. An application for use of PFC funds

in the amount of \$26 million has also been approved. Land acquisition and final design are underway.

- The new \$320 million east parallel Runway 17L-35R at **Dallas-Fort Worth International Airport** (DFW) is under construction and scheduled to be completed in late 1996. When completed, the new runway will bring the total number of runways available at DFW to 7 and provide the airport with additional capacity. The runway will also allow 3 simultaneous precision instrument approaches. This project will prepare DFW to handle the expected 1 million annual operations after the year 2000. Two AIP grants amounting to \$37,500,000 were awarded in FY 1995
- Bergstrom Air Force Base is being converted to civil use to serve the Austin area. The existing airport, Robert Mueller Municipal, has served for more than 65 years, but can no longer grow to meet aeronautical demands. Also, development of the areas surrounding the airport with residential usage has resulted in severe noise impacts to the residents. A major item of construction for **New Austin at Bergstrom** is a new 9,000 foot parallel runway. This runway will supplement the existing 12,000 foot runway. Airport capacity will be significantly improved. Also, the new site will have a drastically reduced noise impact on nearby residents.
- The new third runway at **Phoenix Sky Harbor International Airport** is under construction and scheduled to be completed in 1998. When completed, the new Runway 7/25 will be 7,800 feet by 150 feet. Two earlier grants in FY 1994 for nearly \$21 million funded land acquisition, site preparation, drainage, river bank reinforcement, and engineering design. The 2 current year projects provided funds for Phases II and III of the project. These grants were for \$16,124,761 and \$7,948,490, and included acquisition of additional land, construction of a taxiway and runway pavement, installation of taxiway lighting, and relocation of a road. Another grant in FY 1996 will be necessary to complete the new runway. The completed runway will provide needed capacity improvement and help relieve aircraft delays. Air carrier delays are expected to be reduced by 56,000 hours. This level of delay reduction equates to a savings in operating costs of \$60 million a year.
- The new \$120 million east parallel runway 16R-34L at **Salt Lake City International Airport** was completed in November 1995. It was started in FY 1992, and has received \$54,122,381 in prior year

AIP funds. The new runway is 12,000 feet by 150 feet and parallel to the existing 12,000 foot by 150 foot air carrier runway. It permits simultaneous operations during IFR conditions. The new runway is estimated to save 28,840 hours of delays, resulting in \$31.4 million annual savings its first year of operation. Three AIP grants amounting to \$13,844,382 were awarded in Fiscal Year 1995.

- The construction of a new midfield taxiway at **San Juan Luis Muñoz Marín International Airport** in Puerto Rico will increase the capacity and safety of ground traffic operations. One grant was awarded for \$6,750,507 and included the third phase of a two-directional crossfield taxiway complex on the west end of the airport. The construction of this taxiway system improves ground traffic flow and reduces delays by providing the flexibility to use either of the major runways from any terminal gate with a minimum of ground travel. Estimated annual savings, when the operational level reaches 250,000 operations, will be 1,499 hours, which will equate to \$2.26 million saved by air carriers. Another grant for \$4,669,781 was awarded to construct and improve exit taxiways to the primary air carrier runways. Studies have shown that capacity is vastly improved by reducing runway occupancy times. This project will accomplish that objective. Estimated annual savings, when the operational level reaches 250,000 operations, will be 577 hours, and a savings of \$0.87 million.
- The FAA provided additional AIP funding for construction of aircraft apron and noise mitigation measures under a previously approved Letter of Intent at **Cincinnati/Northern Kentucky International Airport (CVG)**. This grant awarded \$18,345,509 as a continuing payment to help finance the large expansion needed to permit more efficient handling of aircraft traffic and passengers. Rapid growth occurred with the opening of new Runway 18L-36R in 1991 and the establishment by Delta Airlines of a hub operation at the airport. Most of the funds in this increment of LOI funding were used to increase the terminal apron size to serve expanded and new terminal space built by Delta and Comair, Delta's commuter feeder. Delta's major expansion doubled the size of its operation. A midfield concourse doubled the number of gates from 25 to 50, with an increase of the international gates from 3 to 6. Comair also significantly increased their operations at the airport. Comair had previously boarded and unloaded passengers on an

apron area that was used by cargo aircraft. They constructed a new midfield concourse containing 50 gates. Delta and Comair spent nearly \$500 million on these passenger facilities. Federal assistance was used to construct all the apron area required to support Delta's new concourse and Comair's midfield concourse. A total of 50 parking spaces are now available for aircraft at the Delta terminal and 53 for commuter aircraft. There are 17 other gates serving other air carriers, but those aircraft park on apron in existence before this project.

- The FAA provided an additional increment of AIP funding this fiscal year for runway construction for projects in Letters of Intent (LOI) approved in prior years at Denver International (new), Indianapolis International, and Detroit Metropolitan Wayne County International Airports. A description of the construction for each airport follows:
 - ◆ Construction of the new **Denver International Airport** permitted replacement of the capacity-constrained Denver Stapleton International Airport. Despite delays in completion of construction and problems with baggage handling equipment, the airport is now operating. The airport is meeting expectations and has significantly reduced aircraft delays previously encountered at Stapleton. One AIP grant amounting to \$35,779,719 was awarded in FY 1995.
 - ◆ A new 11,200 foot parallel runway is under construction at **Indianapolis International Airport**. When completed in early 1996, it will allow simultaneous precision approaches. This new runway replaces one that did not have sufficient separation from the other parallel runway to permit simultaneous operations. With proper separation, capacity will be greatly enhanced and will permit eventual relocation of the terminal to a location between the 2 runways. One AIP grant amounting to \$6,296,837 was awarded in FY 1995.
 - ◆ The new crosswind runway at **Detroit Metropolitan Wayne County** will provide an independent precision instrument capability that will significantly reduce delays, especially during crosswind conditions. The fourth parallel runway will provide the airport with the ability to operate simultaneous arrivals on the outer 2 runways and simultaneous departures on the inner

2 runways during peak hours. One AIP grant amounting to \$13,610,927 was awarded in FY 1995.

The FAA is authorized to issue LOIs for only specific types of airport development projects and only to those airports with current aeronautical demands that are not likely to be accommodated with funds from current programs. If these airports can underwrite the cost of construction, they can be reimbursed from future program funds without penalty. Before beginning construction, the FAA must approve the scope of work and the proposed funding plan. Once agreement has been reached, the FAA prepares the LOI indicating the intent to provide future funding for the agreed upon project in future years. This expression of intent on the part of FAA is sufficient to reduce the risk associated with making improvements now and not receiving reimbursement in future years. An airport receiving an LOI may proceed with the project without waiting for future AIP grants, and is assured that all allowable costs related to the airport development included in the approved LOI remain eligible for reimbursement. In most cases, the airports finance the projects with revenue bonds. Most receive more favorable bond rates since the Federal government has supported the project and indicated an intent to provide funding from subsequent years of the airport grant program. By the end of FY 1995, there were 25 LOIs that were not completely funded. New LOIs were not considered for approval in FY 1995 because of the expiration of the AIP in FY1996.

APPENDIX A

PROGRAM HISTORY

The Federal Government initiated a grants-in-aid program shortly after the end of World War II to promote the development of a system of civil airports to meet the Nation's needs. This early program, the Federal-Aid Airport Program (FAAP), was established with the passage of the Federal Airport Act of 1946 and funded from the general fund of the Treasury. FAAP grants could be used for basic airport development including airfield construction, passenger terminals, entrance roads, and land needed for the airport.

The Airport and Airway Development Act of 1970 established a more comprehensive program. This Act provided grant assistance for airport planning under the Planning Grant Program (PGP) and for airport development under the Airport Development Aid Program (ADAP). The source of funds was a newly established Airport and Airway Trust Fund that derives its revenues from aviation user taxes on items such as airline fares, air freight, and aviation fuels. The Act was amended several times and was extended one year before expiring on September 30, 1981.

The Airport and Airway Improvement Act of 1982 (Title V of the Tax Equity and Fiscal Responsibility Act of 1982, Public Law 97-248, September 3, 1982) established the successor grant program. The Airport Improvement Program (AIP) provides assistance under a single program for airport planning and development with user taxes from the Airport and Airway Trust Fund. The 1982 Act also provides funds to conduct noise compatibility planning and to implement noise compatibility programs that are authorized by the Aviation Safety and Noise Abatement Act of 1979 (Public Law 96-193).

The Airport and Airway Improvement Act has been amended several times. The first, enacted barely one month after the basic statute, was the Continuing Appropriations Act (Public Law 97-276, October 2, 1982). It provided authority to convert unused apportioned funds for use in the award of discretionary grants. The Surface Transportation Assistance Act (Public Law 97-424, January 6, 1983) increased the annual authorizations for AIP for FY 1983-FY 1985.

The Airport and Airway Safety and Capacity Expansion Act of 1987 (Public Law 100-223, December 30, 1987), extended the AIP grant authority for five years. It authorized \$1.7 billion each fiscal year through 1990 and \$1.8 billion each year for FY 1991 and FY 1992. This Act also authorized the FAA to use the letter of intent (LOI) process to approve high-priority capacity projects with funds that become available in future fiscal years. The LOI indicates to a sponsor Federal approval of a proposed project's scope and the timing for its accomplishment. It also indicates the Federal intent to fund the project in subsequent years. It permits the sponsor to begin construction of the project without an official grant award and to obtain reimbursement for allowable project costs for the development specified in the LOI. Yearly increments of funds are paid from grants, subject to the future availability of AIP funds. Another provision of the 1987 amendment was authorization of a State Block Grant Program in 3 States during FY 1990 and FY 1991. The amendment also established a Disadvantaged Business Enterprise (DBE) Program to help small business concerns owned and controlled by socially and economically disadvantaged individuals. Under the DBE Program, not less than 10 percent of the AIP funds made available yearly for approved construction projects must be awarded to DBE firms and individuals.

The Aviation Safety and Capacity Expansion Act of 1990 (Public Law 101-508, November 8, 1990) authorized FAA to approve collection and use of Passenger Facility Charges (PFC) by public agencies owning or operating commercial service airports. PFC revenue provides airports another source of funds to finance airport-related projects. Approved projects must meet one of the following objectives: preserve or enhance safety, capacity, or security; reduce airport noise; or furnish opportunities for enhanced competition between or among air carriers. This Act also established a Military Airport Program (MAP) for civil airports located at current or former military airfields. The MAP is intended to help improve the capacity of the national transportation system by enhancement of civil airport and air traffic control systems at designated locations in or near major metropolitan areas. Further, the Act extended the State Block Grant Program through FY 1992, and it increased the AIP authorization for FY 1992 to \$1,900 million.

The Airport and Airway Safety, Capacity, Noise Improvement, and Intermodal Transportation Act of 1992 (Public Law 102-581, October 31, 1992) authorized the extension of AIP at a funding level of

\$2,050 million through FY 1993. This Act included a number of changes in AIP. The primary changes include the expanded eligibility of development under the Military Airport Program; eligibility for the relocation of air traffic control towers and navigational aids (including radar) if they impede other projects funded under the AIP; the eligibility of land, paving, drainage, aircraft deicing equipment, and structures for centralized aircraft deicing areas; and projects to comply with the Americans with Disabilities Act of 1990, the Clean Air Act, and the Federal Water Pollution Control Act. The Act also increases the number of States that may participate in the State Block Grant Program from three to seven and extends that program through FY 1996.

Three statutes were enacted during FY 1994 that affected AIP. The AIP Temporary Extension Act of 1994 (Public Law 103-260, May 26, 1994) extended the authorization of AIP until June 30, 1994. It provided that the minimum amount to be apportioned to a primary airport based on passenger boardings would be \$500,000. The act also made modifications to the percentage of AIP funds that must be set-aside for reliever airports (reduced from 10 percent to 5 percent), for commercial service, nonprimary airports (reduced from 2.5 percent to 1.5 percent) and for system planning projects (increased from 0.5 percent to 0.75 percent). It also provided a minimum level of discretionary funds after August 1, 1994. If discretionary funds remaining after all formulas and set-asides are calculated are less than \$325 million, all set-asides and apportionments (except Alaska supplemental funds) must be reduced by equal percentages to provide this minimum level of discretionary funds. Eligibility for terminal development was expanded to allow the use of discretionary funds at reliever airports and primary airports enplaning less than 0.05 percent of annual national enplanements.

Public Law 103-272 (July 5, 1994), Codification of Certain US Transportation Laws at 49 U.S.C., repealed the Airport and Airway Improvement Act of 1982, as amended, and the Aviation Safety and Noise Abatement Act of 1979, as amended, and recodified them without substantive change at Title 49, U.S.C. Several notable name changes were contained in the recodification language. The term *enplanements* was replaced with the term *passenger boardings*. The codification also refers to *passenger facility fees* instead of *passenger facility charges*. These terms, when used in a discussion of legislative provisions and program objectives, are interchangeable.

The Federal Aviation Administration Authorization Act of 1994 (Public Law 103-305, August 23, 1994) extended AIP until September 30, 1996. Significant changes to AIP included increasing the number of airports that can be designated in the Military Airport Program from 12 to 15, but required that FAA find that projects at newly designated airports will reduce delays at airports with 20,000 hours of delay or more; expanded eligibility to include universal access control and explosives detection security devices; and required a number of actions by FAA and airport sponsors regarding airport rates and charges and airport revenue diversion.

APPENDIX B

FIGURES AND TABLES

Figures and tables mentioned earlier in the Forward and body of the narrative are shown on the following pages. Figure B-1 shows, by airport funding category, the cumulative number of grants awarded. Figure B-2 shows, by development or planning type and funding type the cumulative amounts of funds associated with these grants. Following these figures is Table B-1 which shows the types of airport development and planning work elements plus the AIP funds associated with these grants over the life of the AIP. Figure B-3 illustrates the manner in which AIP funds and PFC revenues are used and compares the types of development items funded by each fund source. Table B-2 shows the impact in FY 1995 of the reductions as a result of an obligation limitation of \$1,450,000,000. Table B-3 shows the AIP yearly authorizations, obligation limitations, actual obligations, and grant totals. Table B-4 provides a display of grant totals for the fiscal year based on airport types, block grants, and system plans for the states and territories. Table B-5 provides an array of the primary airports in descending order of passenger boardings, with hub designation indicated for each category. Table B-6 provides an array of the individual grants awarded during the fiscal year and includes an abbreviated description of the work in each grant.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions.

2. It is essential to ensure that all entries are supported by appropriate documentation and receipts.

3. Regular audits should be conducted to verify the accuracy of the records and identify any discrepancies.

4. The second part of the document outlines the procedures for handling cash and credit transactions.

5. All cash receipts should be recorded immediately and deposited in a secure bank account.

6. Credit sales should be recorded on an accrual basis, and accounts receivable should be monitored closely.

7. The third part of the document provides guidelines for managing inventory and stock levels.

8. Inventory should be counted regularly to ensure that the recorded quantities match the actual quantities on hand.

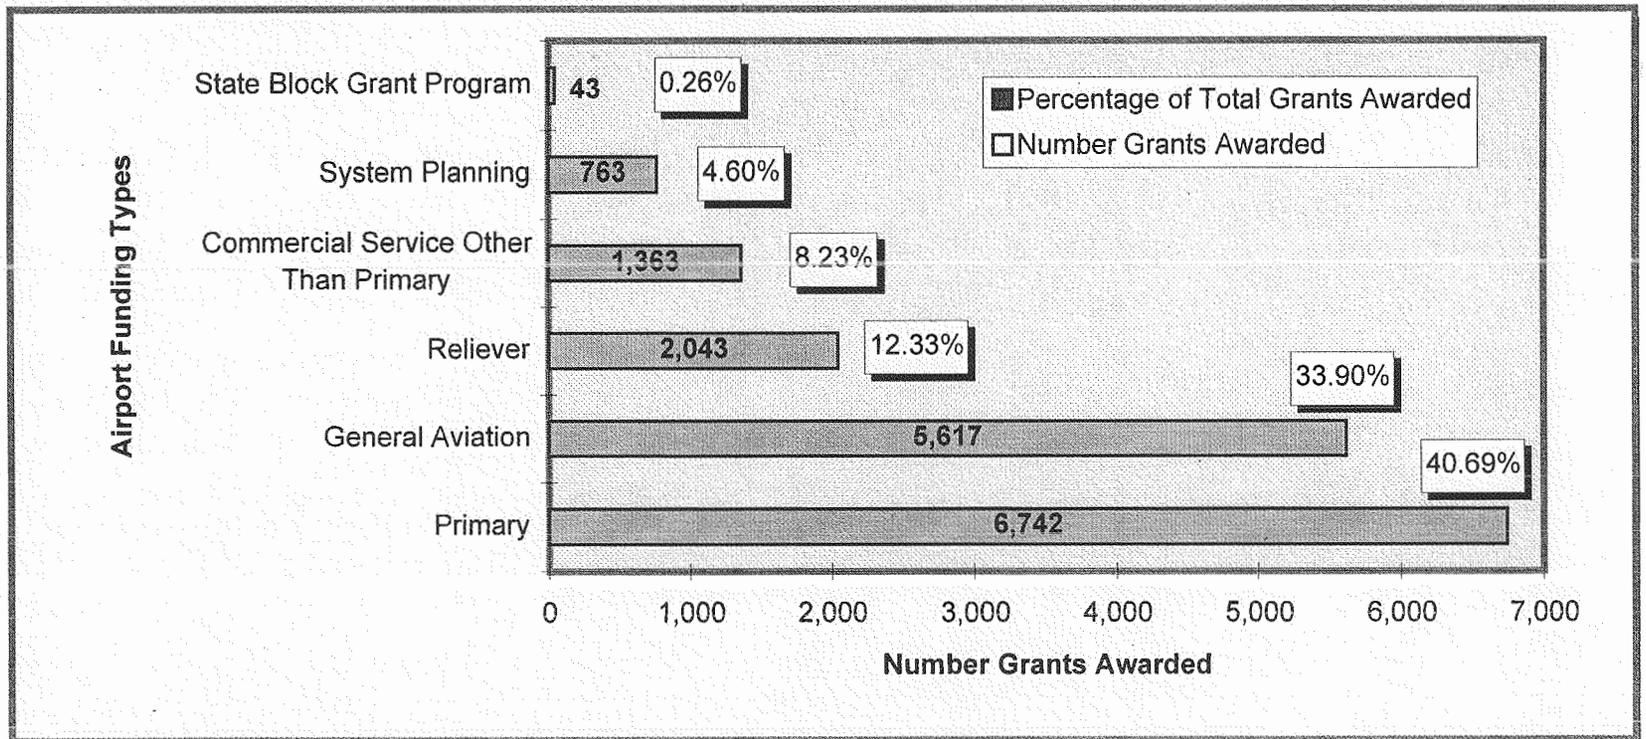

9. The fourth part of the document discusses the importance of maintaining accurate financial statements.

10. These statements should be prepared on a regular basis and reviewed by management to ensure their accuracy.

1994	\$2970.3	\$1690.0	\$1730.7	\$1702.2	1318
1995	\$2161.0	\$1450.0	\$1500.8	\$1418.2	1047

¹ The Surface Transportation Assistance Act of 1982 (STAA) increased authorizations by \$200.0 million in FY 83 and FY 84 and another \$75.0 million in FY 85. The projects approved under this authorization were referred to as "Jobs Bill Projects" since they were appropriated by the Emergency Jobs Bill (Public Law 98-8).

² The FY 83 appropriation includes \$600.0 million of the \$800.0 authorized and \$150.0 million of the \$200.0 million authorized by the STAA and appropriated under the Emergency Jobs Bill (Public Law 98-8), plus another \$54.5 million of unrequested entitlements carried over from prior years.

³ The FY 84 appropriation includes \$793.5 million of the \$993.5 authorized and \$6.5 million of the \$200 million authorized by the STAA and appropriated under the Emergency Jobs Bill (Public Law 98-8).

⁴ The FY 86 appropriation includes \$885.2 million of the \$925.0 million authorized and was reduced by P.L. 99-177, Balanced Budget and Emergency Deficit Control Act.

⁵ The FY 87 appropriation includes the \$1,000.0 million authorized plus a \$25.0 million supplemental appropriation, P.L. 100-71, July 1987.

⁶ Gross obligations include current year funds plus reobligations of funds recovered from adjustments to prior year projects. The difference between yearly gross obligations and new grants are attributed to increases to existing grant agreements.

⁷ Includes ADAP entitlements that were authorized to be continued under the Airport Improvement Program (AIP). FY 82 data do not include an FY 82 grant to Reno, Nevada (Cannon International), for \$5.1 million funded with FY 82 funds authorized prior to approval of the AIP.

⁸ Not included in above figures are reobligated funds recovered from adjustments to obligations made under the ADAP authorized from FY70 - 81. Legislation allowed use of recovered ADAP funds for ADAP grant increases up to a maximum of 10 percent of the original grant amount. For each FY from 82 through 93, the reobligations have been \$7.1, \$6.7, \$7.1, \$5.2, \$4.0, \$6.7, \$2.7, \$3.1, \$1.1, \$0.4, \$0.2, and \$0.1 million, respectively.

Salt Lake City Metro Area (System Plan)	ME	\$46,000	Conduct Metropolitan System Plan Study
State Of Utah (System Plan)	SD	\$108,000	Conduct State System Plan Update (Continuous)
Beaver Beaver Municipal (General Aviation)	02	\$282,186	Rehabilitate Taxiway And Apron; Construct Airfield Lighting Vault; Install Apron Lighting And Visual Approach Aid
Mexican Hat New (General Aviation)	01	\$70,000	Conduct Master Plan Study
Moab Canyonlands Field (Commercial Service)	09	\$1,200,000	Acquire Land For Development; Relocate Powerline

Table B-6

Airport Improvement Program
Fiscal Year 1995
GRANTS AWARDED

Project Location Airport Name/Planning Area (Airport/Plan Type)	Project Number	Federal Funds	Brief Description Of Work
Ogden Ogden-Hinckley (Reliever)	16	\$240,000	Rehabilitate Runway Lighting
Panguitch Panguitch Municipal (General Aviation)	02	\$1,761,811	Remove Obstructions; Rehabilitate And Extend Runway; Construct Taxiway, Apron, And Access Road; Install Fencing
Provo Provo Municipal (General Aviation)	13	\$1,500,000	Extend Runway (Environmental Mitigation And Utility Relocation)
Provo Provo Municipal (General Aviation)	14	\$400,000	Extend Runway (Construct Dike)
Richfield Richfield Municipal (General Aviation)	02	\$30,667	Improve Drainage
Salt Lake City Salt Lake City International (Primary)	46	\$4,984,382	Conduct Master Plan Study And Noise Compatibility Plan Study; Construct Runway (Multi-Year Project. Total Federal Commitment \$5,692,575)
Salt Lake City Salt Lake City International (Primary)	47	\$6,860,000	Construct Runway
Salt Lake City Salt Lake City International (Primary)	48	\$2,000,000	Install Taxiway Lighting
St George St George Municipal (Primary)	10	\$80,000	Conduct Master Plan Study (Multi-Year Project. Total Federal Commitment \$201,330)
St George St George Municipal (Primary)	11	\$786,345	Install Security Fencing; Construct Taxiways (Phase II); Rehabilitate Runway And Taxiway Lighting; Install Taxiway And Apron Lighting (Multi-Year Project. Total Federal Commitment \$954,428)
Wendover Wendover (General Aviation)	07	\$121,110	Acquire Power Sweeper
Wendover Wendover (General Aviation)	08	\$308,341	Acquire Aircraft Rescue And Fire Fighting Vehicle And Equipment (Proximity Suits)
Subtotal FY 95 Funds		\$20,778,842
